1917.

Volume B of the Meerut District Gazetteer.

BOUNDARIES AND AREA.

In order to give the authorities of the newly constituted province of Delhi more complete control of the area in the vicinity of the capital, all the villages within five miles of the railway bridge over the Jumna were transferred from this district to the Delhi province with effect from April 1st, 1915.

The total area transferred was 29,177 acres or approximately 46 sq. miles. The new boundary in this tract runs from the river bank five miles north of the railway bridge south of Loni town and circles round to a point on the road east of Shahdara. Thence it runs south to the border of Bulandshahr district. The town of Shahdara and the supposed site of the battle of Patparganj are included in the area transferred.

PHYSICAL FEATURES.

After a long dry cycle such as the district has recently passed through attention is naturally focussed upon tracts, which are poorly irrigated, owing to the absence of canal distributaries and the impossibility of giving adequate protection by wells. These tracts include the portions of the Barnawa pargana between the Hindan and the Kirsani, where the water level is deep and irrigation expensive, the Sarawa pargana, which though formerly liable to water-logging, now suffers from inadequate well protection, the strips overhanging the Khadirs of the Jumna, Hindan and Ganges, to which canal protection has not been fully extended, portions of the Jumna Khadir in the Loni pargana, left in the district, and the tract between the Kali Nadi and eastern Chhoiya. Of these the Barnawa tract is fortunate in possessing facilities for sinking semi-permanent earthen wells. These, though deep, last a long time. The large Jat villages of the tract attain to a high standard of cultivation and though the struggle is severe in a dry year the tract has not suffered seriously. The Sarawa pargana does not present any great difficulties in the way of extension of well irrigation. In the strips

overhanging the Khadirs on the other hand well sinking is extremely difficult except in favoured parts such as a cluster of villages in the south-east of the Baghpat pargana. This difficulty is due apparently to the large amount of sand in the subsoil noticed in the account of the Hastinapur pargana and partly to the sub-soil water draining off at a low level into the adjacent khadir. There are probably few tracts in the district to which canal irrigation could be more advantageously extended than these tracts; where this has been done as in the Puth pargana and portions of Kithore the light soil yields excellent crops; projects are now in hand for extension between the Anupshahr branch and the Ganges Ravines. These Ravines are known throughout the district as Khola or undulating ground. There seems now to be some prospect of Mr. Gillan's scheme for a fuel and fodder reserved in the Khola at last being carried out. The afforestation officer has recently visited the tract and on his advice some experiments are to be taken in hand.

GENERAL FEATURES.

The Loni pargana has always been notorious for the precarious nature of its cultivation. The khadir owing to the proximity of Delhi is very fully cultivated in favourable seasons, but it is liable to damage, both from floods and drought and as remarked in the gazetteer probably receives less rainfall than any other part of the district. The Kali Nadi tract has lately caused a considerable amount of anxiety. The upper portion in the neighbourhood of Lawar and Phalauda is fully protected by both masonry and earthen wells, but the middle portion in the Meerut tahsil is not so well protected. Rents are high owing to proximity to the city and to the fully irrigated tracts on both sides and relief measures have been necessary in several years lately.

The drainage lines described in the text have secured the greater part of the district from serious damage from flooding.

In a few cases the sudden heavy falls of rain characteristic of a dry cycle have caused local damage which has necessitated small extensions. On the whole one is tempted to wonder if it would not have been wiser when modelling the drains to have combined with this some measures of conservation of water by

floodgates to the principal tanks by which water could have been held up or drained off according to the character of the season.

THE GANGES KHADIR.

The dry cycle has not resulted in any great extension of cultivation in this tract. In the most extensive portion that lying in the Hastinapur pargana the records show 23,436 acres under cultivation in 1319 fasli as compared with 23,244 acres at settlement. While the corresponding figures for Kithore are 13,673 in 1319 fasli and 12,569 at Settlement, Garhmuktesar 12,567 in 1319 fasli and 13,324 at Settlement. Puth 8,698 compared with 10,727 at Settlement. The whole tract has changed little since the description of it in the gazetteer was written. It is not easy even after a time dry cycle to imagine that any great change is possible. The middle khadir is no doubt above the ordinary flood level but it does not seem to have been foreseen fifteen years ago that khadir lands are just as liable to damage from drought, as from floods. The soil is poor for the most part and owing to the nature of the sub-soil, irrigation from wells except to a very small extent is impossible. The water level is high, but the sinking of tubes presents difficulties, which have so far proved insuperable. The gazetteer mentions the improvement, which was then taken place in the Kithor pargana. The subsequent history of this area illustrates another of the difficulties in the way of securing stable cultivation in this very precarious tract. Extensive cultivation down to the river bank seems to have left the soil loose and at the mercy of the floods and large areas formerly fully cultivated in the neighbourhood of Khanpur are now dreary wastes of sand and jhao. Two considerable villages sites have been completely washed away. Lower down there seems some tendency to yet another danger of khadir cultivation, which is more marked on the east bank of the river in the Moradabad and Budaun districts. The river constantly threatens to break through the middle khadir ridge in heavy floods and tear through the tract under the high ground drained by the Burhganga. To this cause is attributed the absence of improvement in the lower portion of the khadir in the bay north of the bluff over the river at Puth; though locally the damage is set down to the building of Garhmuktesar railway

bridge, which is said to have upset the natural flow of the river.

Cattle Census.

The following table shows the result of census taken in 1899, 1904, 1908, 1914.

Year.		Bulls and bullocks.	Ploughs.	Carts.	Male buffaloes.	Cows.	Cow buffaloes.	Young stock.
1899	..	252,866	105,700	36,324	4,366	129,620	124,827	293,826
1904	..	253,586	108,760	..	3,708	132,327	128,518	308,642
1908-09	..	236,088	102,906	42,240	3,316	115,796	130,685	279,882
1914	..	243,484	105,812	44 886	3,610	118,414	139,949	293,074

It will thus be seen that there has been a steady decrease in all live-stock except cow-buffaloes for the years 1904 to 1908-09. But again from this year a steady improvement is noticeable, and there is every hope that the total stock will soon exceed the number registered in 1899, as all stock is now on the upward grade. The number of horses and ponies decreased from 18,811 in 1904 to 17,492 in 1908 but the number of mules increased, from 3,344 in 1909 to 4,090 in 1908-09.

Cattle disease.

The returns from the district under this head are as usual incomplete. There is always difficulty in ascertaining the true state of cattle disease owing to the reticence of people on this subject. The most common disease appears to have been Rinderpest: there was a severe outbreak of this scourge in 1910-1911, in the latter year there was also a severe outbreak of foot and mouth disease. Hemorrhagic septicaemia raged in 1910, and anthrax visited the district in 1908, 1911 and 1913. These figures apply exclusively to bovines, no figures are available for equines and others.

Health.

The period has been remarkable for some very unhealthy years. For 3 years in succession from 1907 to 1909 and again in 1911 the deaths exceeded the births and in 3 years a death rate of over 50 per mille was recorded. The first serious epidemic of plague occurred in 1905 in which year tahsils, Hapur, Ghaziabad and Mowana were seriously affected. In 1906 the district was comparatively free from disease but a very serious

recrudescence took place in 1907 when the deaths exceeded 23,000 and again in 1911, the census year when the number of deaths exceeded 37,000 and the death rate from all causes rose to over 57 per mille. 7,000 deaths were recorded in both Mowana and Sardhana tahsils. The year 1908 will probably be long remembered for a severe outbreak of malaria which affected most of the neighbouring districts. The whole of this district was affected and the death rate rose in that year to 54·12 as compared with an average of 30·0 in 1891—1901. Baghpat, Ghaziabad and Hapur were particularly severely hit; the recorded death rates being 62·42, 64·92 and 52·26 per mille respectively. 1909 was also a bad year for malaria; but since then the outbreaks have been much milder and recorded deaths from the disease would probably be considerably lower but for the appearance of relapsing fever in parts of the district, which accounts for the number of deaths ascribed to malaria. The gazetteer gives support to the theory that canalisation is responsible for the high mortality from malaria; but however this may be in ordinary years it is certainly not true for the year of this severe epidemic. In 1908-09 the tracts most affected lay in the south and south-west portion of the district. Those in the south-west corner certainly showed a combination of high mortality and heavy irrigation but as those in Hapur tahsil were equally severely affected and at the same time comparatively sparsely irrigated no definite conclusion connecting these two phenomena can be formulated. Since the outbreak of 1908-09 systematic efforts have been made to popularise the use of quinine during epidemics; 100lbs. were distributed in 1908 and 126lbs. in 1909-10 at a total cost of over Rs. 2,090, The district was divided into circles and a very complete system of distribution organised by Rai Ratan Chand Sahib, then Secretary of the district board.

Quinine powders and pills were sold through zamindars and their agents, patwaris, tahsildars and stamp vendors. Since then travelling dispensaries and the introduction of quinine prophylaxis in schools have done much to popularise the use of the drug. Looking at the statistics we see that the average of fever mortality is 56,000 compared with an average of 42,000 in the decennium before, and in 1908 the number of deaths rose to 79,445.

TRAVELLING DISPENSARIES.

The district has three travelling dispensaries. They are under the charge of Sub-Assistant Surgeons.

The district is divided in 3 circles viz. Sardhana, Meerut tahsils in one, Baghpat and Ghaziabad in the 2nd and Mowana and Hapur in the 3rd circle.

These were established in July, 1911. They work by perambulation round villages.

40,267 persons were treated in 1914-15, and their popularity is increasing rapidly.

WELLS.

The recent day seasons have given a considerable incentive to the construction of masonry wells. Private enterprise has been stimulated by liberal advances of takavi. From 1309 to 1319 fasli approximately 1,433 masonry wells have been constructed with the aid of takavi. The returns for the year 1322 fasli show that there are now 16,606 masonry wells in the district against 10,878 at settlement. The increase is chiefly in the south of the district in the tracts which do not receive canal irrigation. In addition to this, improvements in the method of sinking tubes have resulted in increasing the supply in large numbers of existing wells. Tube sinking as a means of tapping a water bearing stratum below the bottom of the cylinder was first introduced by the agricultural department but independent borers chiefly from the Punjab are now common and their methods though somewhat slow generally give satisfaction. Further experiments in the way of convoluted tubes and power-lift are still in their infancy but it may be mentioned that the Army Remount department have successfully installed a pumping station which supplies water from the Kali Nadi and irrigates a considerable area inside the dépôt.

Page 68—RAILWAYS.

The two projected lines mentioned in the text, the Oudh and Rohilkhand branch from Meerut through Hapur to Bulandshahr and Khurja and the Shahdara-Saharanpur Light Railway were completed in 1905 and 1907 respectively. The first has stations in this district at Kharkhauda, Panchi, and Hapur.

The latter has stations at Noli, Gothra, Khekra, Baghpat Road, Sujra, Baraut, Baoli, Kasimpur Kheri, and has already raised the towns of Khekra, and Baraut to the status of important grain markets. Incidentally it has been the cause of a great reduction of traffic across the Jumna through Baghpat, though there can be little doubt that improvements to road communications across the river would lead to a revival as the character of the harvests on the different sides of the river differ considerably and there is considerable interchange. In connection with the Light Railway systematic improvement of the feeder roads has been undertaken by the District Board with the aid of government grants. The project for extension to Meerut is still in abeyance but surveys have been recently completed for another light railway on the east of the district connecting the headquarters town with Parichatgarh and thence with Garhmuktesar and Roorkee.

ROADS.

The metalling of the Bijnor road as far as Mowana has been completed. The road has been continued through the town to the bank of the Anupshahr Canal in order to give through communication with the flour mills on the canal. Subscriptions have been raised recently for the metalling of the connection between Sikhera on the Hapur Garhmuktesar railway and Kuchesar in the Bulandshahr District. With the aid of these and grants from the two district boards the road will probably be constructed in the near future. The metalling of the Sardhana-Daurala road was completed in March 1913. As noted elsewhere the consequent shortening of the distance from the railway has not yet had the effect of improving the Sardhana markets.

The list of unmetalled roads has been revised according to the scheme prepared in connection with the revision of District Board financial arrangements. The Board will now be able to devote ample funds to the upkeep of the main arteries which have classified as second class. Some of them have been already raised and improved and it is to be hoped that it will be possible to remove the reproach against them in a few years time. A high standard of cultivation and the numerous irrigation channels of all sizes which confine the limits of the roads and tracks renders the maintenance of unmetalled communications in this

district exceptionally difficult. This is so much the case that the District Board finds itself constantly called on to assist local enterprise to rescue quite important tracks from the condition of narrow drains much below the level of the neighbouring fields. Encroachments on roads of all classes are common and require constant attention.

The following is a list of unmetalled roads in the Meerut District under the control of the District Board :—

Serial no.	Name of road.	Mileage.
	SELECTED ROADS.	
	Tahsil Baghpat.	
1	Baraut Chhaprauli	9

8	Jafrabad to Ferry road	1

CENSUS.

The main facts noticeable in connection with census comparision of the years 1901 and 1911 is a decrease of over 20,000 as compared with a large increase in the decennium before the actual figures being 15,90,175 in 1901 against 15,19,364 in 1911. Meerut district has suffered severely from plague, while Baghpat, Ghaziabad and Hapur were hit more or less severely by the malaria epidemic of 1908. The birth rate (41·5) exceeds the death rate (39·2) by 2·3 which seems to show that the population has not lost so severely as the figures indicate. It is also quite possible that this decrease is due to, movements of population to avoid plague which was very severe at census time. Indeed Meerut was suffering worse than any other district in the province. The rate of increase as shown by the vital statistics and decrease shown by the census statistics closely approximate to the similar figures for the whole province, but in the latter case emigration explains them.

The distribution of the population among the main religions will appear from the following figures:—

	1901.	1911.
Hindus	1,145,728	1,124,867
Sikhs	360	2,706
Jains	16,930	16,935
Mohammadans	359,895	344,888
Christians	12,203	18,142
Aryas	5,056	11,797

Christians, Aryas, and Sikhs continued to increase.

LEADING MEN.

Since the completion of the last Gazetteer the following changes among the leading men have to be recorded:—

Sheikh Hafiz Abdul Karim Khan, Bahadur, C. I. E., died on November 7th, 1915, and was succeeded by Sheikh Wahid-uddin Khan Bahadur, Chowdhri Debi Singh of Asora (deceased) has been succeeded by Rai Raghbir Narain Singh, Sahib. Hakim Mukarrab Husain Khan has died without a successor. Hafiz Abdul Rahim of Bahadurgarh has been succeeded by his son Hakim Ubedullah Khan. Hakim Hamid Husain Khan of Meerut City has left as successor his son Sadiq Husain. Muhammad Khurshed Ali Khan, of Baghpat has died leaving Mohammad Jamshed Ali Khan, his

son as successor. Musammat Dharm Koer of Landhora died on 12th November, 1912. She was succeeded by Chowdhri Balwant Singh her adopted son, now in possession of the whole estate. Munshi Mohammad Sadiq, a Deputy Magistrate in the Irrigation department, has also died.

PRESSES AND NEWSPAPERS.

There are 34 presses in Meerut district, all save two are in Meerut. Seven are in cantonments and the remaining 25 are in the city. There is no Press at Sardhana now.

NEWSPAPERS.

Altogether 29 newspapers are published in the district. The "District Gazette" is a fortnightly paper published in Urdu by the District Board, Meerut, and printed at the Faiz-i-am Press. It contains miscellaneous news. Annual subscription is 14 annas. Another paper "Saudagar" is printed weekly, in the Ram Machine Press. It contains articles of general interest and has an Arya Samaj bias; its annual subscription is Re. 1-4-0. Two more important papers are published in the district—the "Asre-Jadid" and the "Uswai Hasna." They both are printed in the Asre-Jadid Press and contain quotations and essays on Mohammedanism and comments on the Quran. A Hindi monthly paper named the "Bharat Mahila" is printed in Hindi at the Bhasker Press. Advocating an advance in woman's position. Its annual subscription is Re. 1-8-0. The rest are monthly journals which deal chiefly with religious matters. Of these there are two Magazines, one is the Parish Magazine and the other is the Meerut College Magazine.

SOCIETIES.

There are about 120 societies in the Meerut District, the most important of which are detailed below:—

(1) The Vaish Maha Sabha was established in 1894. There are about 250 members. It supports a Vaish orphanage institution which is prospering. There are 102 orphans who are given free education, food and lodging. It is a registered body.

(2) The Rajbans Vaish Agarwal Sabha is also a Registered body. There are about 80 members. This Sabha supports a Rajbans Agarwal Boarding House. It was established in 1897.

(3) The United Provinces Maha Sabha Mandal is a body of the Sanatan Dharam Samajists and was established in 1915. There are about one thousand members. Paid lecturers have been deputed to preach the old orthodox Hindu religion and militate against the influence of other religions. This Sabha also looks after Hindu temples. All the Sanatan Dharam Sabhas of the Province work under this Mandal.

(4) There is also a depressed classes society in the Meerut city which supports a school in which low caste boys are taught. There are about 50 members and it was established in 1912.

(5) The Muslim League District Branch was established in 1909 and there are about 50 members. The league looks after the rights and interests of the Mohammedans of Meerut.

There are about 12 Gaushalas in the District. Their aim is to save cattle from slaughter.

There are other societies such as the Arya Samaj, Sanatan Dharam Kayasths, Rajputs, Jats, Mohammedan and Lodha Communities but they are of less importance.

The Meerut Association and the Theosophical society are flourishing.

Mention might also be made of the Said Manzil club, open to all denominations opened in 1913. Its functions are social, its numbers small and the less expensive Jubilee club which occupies a portion of the town hall.

LITERACY AND EDUCATION.

From the recent census statistics it appears that the number of male literates in Meerut increased from 56 to 63 per mille and females from 2 to 6 per mille in the decennium 1901 to 1911. In 1911 82 males were literate in English as compared with 69 in 1901 and 57 in 1891 per ten thousand of the population; of females 12 in 1911 compared with 9 in 1901, and 8 in 1891. The number of Hindu males per mille who were literate in 1911 was 58 per mille compared with 41 Mohammadans per mille but 5 Mohammadan females per mille were literate as compared with 4 Hindus.

EDUCATION.

Table XVIII shows that extension has been rapid during these 10 years. The district is now on the eve of embarking

on the systematic scheme for the extension of Primary education recently evolved. This for the first time will bring the educational authorities into touch with the needs of the district as a whole instead of concerning themselves as they have hitherto with the few villages in which schools happen to have been established. The slight set back to progress in the year 1908-09 was due principally to change in system and uncertainty as to the future plan of campaign.

Facilities for English education at headquarters have been greatly developed. There are now in existence the following schools teaching up to the High standard; the Government High school, Nanak Chand Anglo-Sanskrit school, the Faiz-i-am school, the Deonagri School and the Church Mission High School in the city and the A. V. High School in cantonments. In addition to this the English school at Hapur has been raised recently to the High standard. The committees of the Faiz-i-am and Deonagri schools are acquiring spacious sites in the vicinity of the city on which it is intended to erect school buildings suitable for modern requirements. The chief need now is the improvement of hostel facilities. English classes in the Tahsili schools have been abolished in accordance with recent policy but the demand for English education in the smaller towns still continues and is met principally by private schools which have a precarious existence.

Rents and Assets since the last Settlement.

The settlement in almost all tracts is already extremely light. Many estates now receive in rents 3 or 3½ times of the Revenue and in many of the circles the average of non-occupancy rent is now more than 0-8-0 in the rupee higher than it was at settlement. For the whole district the average of occupancy rents has risen from Rs. 5·41 per acre to Rs. 5·64 in 1319 fasli and is still on the increase. For Non-occupancy rents the corresponding figures are Rs. 7·24 rising to Rs. 10·58. The following comparison between the principal classes of holding in 1311 Fasli and 1319 Fasli is perhaps worth putting on record.

Statement showing classification of holdings for 1319 *fasli or* 1911-12 *and* 1311 *fasli or* 1904.

District.	Area of holdings in acres.													
	Held as sir.	Held by zamindars other than Sir, and Thekedars cultivation.	Held free of rent.	Held by permanent tenure holders and fixed rate tenants.	Held by expropriatary tenants.	Held by occupancy tenants with occupancy rights.	Held without declared rights. On lease for not less than 7 years.	Held without declared rights. For 12 years or more.	Held without declared rights. For less than 12 years.	Total area of holdings (columns 2 to 10).	Uncultivated land included in holdings.	Rent free and nominally rented area (columns 2 to 4).	Land included in holdings on which rent has not been determined.	Remarks.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
1913.

Years before 1311 being classified on a different principal are not included.

Page 23.—EXCISE (PAGE 140-141).

The District Officer writing in 1910 noted as follows :—

There are now 104 shops licensed for the sale of Country Liquor as against 77 in 1902. In the last six years the average derived from duty and licence fees amounts to Rs. 2,15,159. The results of the policy of Government in restricting consumption and increasing duty are strikingly shown.

In 1907-08 the revenue derived was Rs. 51,000 greater than in 1902, while the amount consumed actually decreased by 7,000 gallons.

The average receipts from opium for the last 6 years amount to Rs. 50,638. The average consumption has been about 76 maunds.

The total receipts from drugs have risen from Rs. 31,767 in 1903-04 to Rs. 43,091 in 1908-09. The average consumption of charas for the last 6 years has been only 38 maunds.

Excluding the year of scarcity 1908, excise receipts have maintained a high level. In 1908-09 the total receipts were Rs. 3,06,417 but the average for the last 6 years was Rs. 3,74,080. The average for 1898-1902 being Rs. 2,69,314, it is obvious the prosperity of the district has been more than maintained.

Since 1908-09 the total receipts have uniformly increased, though the number of shops for the sale of spirit, drugs and opium has declined during the decennium. A decrease of 79 country spirit shops 14 drug and 7 opium shops are recorded between 1902 and 1912, which is being maintained at the present time. In 1908-09 and 1909-10 consumption of country spirits decreased but with the exception of these 2 years ; the period marks a steady rise. The consumption of charas was exceptionally low in 1909 and this drug appears to be losing popularity. The average consumption of opium for the last 3 years of this period was considerably below the average, a decrease which is apparently steadily maintained.

Page 24.—LOCAL SELF GOVERNMENT.

Two of the remaining municipalities, Mowana and Sardhana have since been reduced to the status of notified areas. Shahdara was transferred to the Delhi Province from April 1st, 1915.

In all these notified areas octroi has been replaced by a tax on circumstances and property. Baraut owing to the opening of

the Shahdara-Saharanpur light railway in 1907 has expanded rapidly; Baghpat on the other hand has declined. The old town has been excluded from the limits of the notified area; which now has a population of only 2,976 persons. The town is at some distance from the light railway and its trade has gone to Baraut and Khekra. The other notified areas remain more or less in a state of stagnation. Efforts were made to improve the condition of Sardhana by giving it direct connection with the railway but so far the new road has not had much effect on the trade of the town as the cultivators of the neighbourhood still prefer to take their produce direct to the big markets in Meerut. Schemes for the improvement of drainage in Mawana, Baraut, Sardhana, and Pilkhua are now in hand and will probably be carried out with the aid of government grants.

In the Meerut municipality a tax on houses and lands was introduced in 1904-05. The poorer classes of houses were exempted two years after. Subsequently the assessments were overhauled by a deputy collector, whose services were lent by Government; with the result that income under this head was considerably improved. In 1907 a special grant was made by Government for the improvement of nazul property in civil lines. The income and expenditure include large sums collected and handed over to the cantonment authorities; in addition to the amount paid by the latter for water supplied to them. The totals given in the statement are therefore misleading. In Hapur the municipal boundary was extended in 1906 to include the area in direction of the railway junction. Trade received fresh impetus from the opening of the Hapur Khurja railway. Expansion was checked at first by local dissensions but development has since been rapid and the town now is now one of the chief centres for grain storage in this and the surrounding districts. A new ganj has recently been built in the neighbourhood of the railway junction and a siding has been constructed at a total cost to the municipality of about Rs. 50,000, but local dissensions are again hampering the success of this new development. The affairs of the municipality have been managed under the guidance of a non-official chairman since 1913. In 1910-11 a government grant of Rs. 1,00,000 was received for the carrying out of a drainage

scheme. This has since been completed at a total cost of Rs. 1,44,935. In Ghaziabad the municipality has been under a non-official chairman since 1909. Octroi on grain and sugar was abolished in 1904 and on all other articles in 1913. The municipality now derives its income from a tax on houses and lands supplemented by a tax on circumstances and property and one in grain dealings. A drainage scheme has been prepared but has not yet been carried out. Both here and in Hapur local opinion is not favourable to the proposals of the sanitary department to combine a water supply scheme with the arrangements necessary for the flushing of the drains. An ambitious scheme for the complete remodelling of the drainage system of Meerut has been prepared but this still awaits further enquiries into the possibilities of combining it with an electric supply scheme and a tube well installation for supplementing the water supply.

In the Act XX towns considerable progress in the way of improvements to sanitation has taken place since the towns were relieved from police charges in 1st April, 1914. In Khekra and Garhmuktesar the main lines of drainage have improved with the aid of Government grants. The provisions of the act have been withdrawn from Kutana, Dhaulana and Baisuma.

DISTRICT BOARD.

The rise in educational receipts between 1906 and 1908 was due to contributions made by municipalities and notified areas to the Board, which took over all their schools. Since then the tendency in the larger towns has been in the opposite direction. The three municipalities are now arranging to take back the management of their primary schools. The large increase in receipts and expenditure under the head "scientific" is due to the incorporation of the Garmuktesar and Nauchandi fair accounts. The district board now manages both these fairs but spends all the income derived from them on improvements to the arrangements. A whole time paid secretary was appointed in 1908. The accounts for the years 1908 to 1912 include large items on account of the sale of the old headquarters hospital and the construction of the Ludovic Porter Hospital. This building was completed at a total cost of Rs. 1,38,806 in 1912 and opened by the Lieutenant-Governor Sir John Hewett on 18th December,

1911. It provides greatly improved accommodation for patients both male and female and is probably one of the finest and best equipped hospitals in the Provinces. The female dispensary cost Rs. 79,991. The old buildings were sold to the municipality and are now used as municipal offices. Educational developments and improvement to communications are mentioned elsewhere. The introduction of travelling dispensaries primarily to cope with plague and malaria is also mentioned in the notes on Chapter I. A scheme for village sanitation has been recently started under which villages are given a grant partly from Government funds towards the upkeep of a permanent sanitary staff. This scheme is now in force in some 37 villages and is on the whole working successfully in spite of some local opposition.

The district board has received the full income from local rates since the close of the period and is now working under a system which provides standards of expenditure fixed by Government for the most important branches of its activities.

RATAUL. PLATE OF CHAHADADEVA. ADD TO CHAPTER V.

Some 30 years ago a copper plate was discovered in Rataul, a village in the Baghpat pargana of this district bearing an incription in old Sanskrit language. It was discovered by a resident of the village of Rataul while he was excavating a piece of land for old bricks. The plate which is said to have been embedded in a domical structure 10 or 10½ feet below the surface was broken to pieces by the diggers and all save one of the fragments are said to have been lost. This is much to be regretted for so much of the inscription as remains is of considerable interest.

This surviving fragment was acquired for the Director-General of Archaeology in 1911 by Mr. J. R. Pearson, I. C. S., District Officer of Meerut. It measures 10½″ in width at the top by 3⅝ in height. It is complete only on the upper side but a rough estimate of the total breadth of the fragment may be formed with the help of the missing portions of the verses that remain. It is impossible however to find out the entire height or the total number of lines as it is not known what portion of the plate is broken off at the bottom. As deciphered by one of the epigraphists of the Archaeological Department Mr. Raya Ram

Satmi, M. A., it appears that the extant portion of the document consists of parts of 6 lines.

The language of the inscription, as far as it goes is metrical Sanskrit with the exception of the first line. The first verse, which is in the Arya Mitre, covers the entire extant portion of line 2. The object of the document was presumably to record a gift of land to one or more Brahmans. The donor was the chief heir apparent, the illustrious Chahadadeva, whose name is engraved in large characters in the top line. The then ruler is praised highly and is described as "lord of the land of Sakambbari."

The surviving portion of the inscription supplies no clue as to the place of Chahadadeva in the Chahamana pedigree. There is one thing, however, about this prince which seems to be fairly certain namely that he is the same as the ruler of that name who flourished at Marwar (ancient Nalapure) in Gwalior state in the first half of the 13th century A. D.

NOTE TO FACE TABLE II.

The distribution of police circles has undergone certain changes during the last 10 years. The number of police stations was reduced from 33 to 22 under the revised scheme of Mr. Hoskins, with effect from 17th November, 1907, and the following police stations were abolished :—1. Bakser Khera, 2. Kanker Khera, 3. Mau Khas, 4. Dhaulana, 5. Muradnagar, 6. Loni, 7. Baleni, 8. Buxar, 9. Bahadurgarh, 10. Khanpore, 11. Daha. Bobakpur and Laliana noted in table II were only temporary police stations. Further re-distribution has since taken place owing to the transfer of the Shahdara area to Delhi, and the old police station at Baleni has been re-opened. A revised list of police stations with populations will be found in table II.

NOTE TO FACE TABLE XIII.

The decrease in income and number of assessees from 1903-04 is due to the abolition of assessments on incomes under Rs. 1,C00.

The following table, giving a consolidated account of the area under each of the most common and important crops from 1316 to 1323 can be utilised for the purpose of comparison of increase or decrease for any particular crop throughout the whole district.

In 1912 the barren area in the district was reduced to 1,70,267 as compared with 1,77,429 in 1902.

Year.	Rabi.							Kharif.					
	Total area in acres.	Wheat.	Wheat and gram.	Wheat and barley.	Barley.	Gram and peas.	Other crops	Total area in acres.	Maize.	Juar.	Cotton.	Sugar-cane.	Other crops.

* Records before 1316 have been prepared on a different principle and under different hends and cannot therefore be included in the above.

RAINFALL. CHAPTER I, PAGE 31.

In view of the importance and precarious nature of the rainfall it is thought as well to add a statement showing the figures for the last 10 years since the compilation of the 1901 Gazetteer. The Monsoon rainfall all over the district is light and uncertain and its character is of very great importance to the prosperity of the district in spite of the protection afforded by canals. Not only are these considerable tracts, which do not enjoy this protection, but even in the canal tracts, during the dry cycle through which the district has been passing, inadequate rainfall in the catchment area coupled with greatly increased demand has so reduced the supply available in the canals that the outturn has been seriously affected.

APPENDIX I RAINFALL.

Years.	From 1st June to 30th September.	From 1st October to 31st January.	From 1st February to 31st May.	Total.	Remarks.
1901-02 ..	17·9	0·3	0·6	18·8	
1902-03 ..	28·3	1·7	0·5	30·5	
1903-04 ..	18·0	0·9	3·9	22·8

1912-13 ..	17·70	12·10	2·56	32·36	

HARVESTS.

In the following note the rainfall figures taken from season and crop reports from 1905 onwards are (*a*) early monsoon from April to August (*b*) late monsoon period from September and October. The normal figures for these periods are 19·99 and 4·87 respectively. It will be seen from the table preceding that a change in statistical methods was introduced after 1904-05 up to that time the period had been divided (*a*) from 1st June to 30th September, (*b*) from 1st October to 31st January, (*c*) from 1st February to 31st May. The years in the decennium which call for special comment are 1905-06, 1907-08 and 1911-12. In 1905-06 the rainfall in both these periods was half the normal. The sugarcane crop was particularly poor yielding only 50% of the normal outturn. The loss was due partly to defective seed-canes which had suffered much from the frost but mainly to the drought. Fortunately the price of gur was higher than in recent years, so that money loss was much reduced. Parganas Loni and Barnawa with fewer facilities for irrigation than the west of the District had poor crops in both seasons. The wheat crop was 25 per cent. below normal, Bajra 50 per cent. Maize and gram 40 per cent. each, and cotton 25 per cent. below normal. Suspension of Rs. 55,567, of the Kharif revenue was sanctioned, but as the revenue administration report shows unexpected rain in February partially saved the situation, and all except 890 of this amount was collected. The sum of 890, which appertained to pargana Loni, was converted into remission, and a further sum of Rs. 34,570 was remitted at the rabi harvest on account of damage done by hail. In 1907 the early monsoon rainfall only amounted to 4·07″. No rain fell in September and October. Wheat was 35 per cent. below the normal; Barley, 25 per cent.; Maize, 40 per cent.; Gram, 55 per cent.; and Cotton, 50 per cent. In this year the Kharif was sown a month later owing to early droughts and Rabi crops suffered from want of rain at the time of sowing. The remission for Kharif and Rabi crops harvests was Rs. 80,064 and Rs. 47,365 respectively. The suspension was Rs. 20,6,784 and Rs. 1,47,421 respectively. In 1911-12 the early monsoon rainfall was only 5·35″ but abundant rain amounting to 14·4″ fell in the latter period and ensured a good Rabi.

Sugarcane was 20 per cent. and Cotton 30 per cent. below the normal. There was no remission or suspension of Revenue. In 1913-14 rainfall was 8·3″ below normal. 20″ fell from April 1st to August 31st, and the Kharif crop did not suffer severely. No remission or suspension of Revenue was allowed for this harvest. The Rabi crop suffered from scanty rain in the late monsoon period (0·53″) and in the cold weather wheat was 25 per cent. below normal. Rs. 1,08,985-12-0 remission and Rs. 61,899-9-6 suspension was allowed for Rabi 1321. Sugarcane was 40 per cent. below normal; Gram, 55 per cent.; and Cotton, 20 per cent.

Harvests were satisfactory in the other years in the decennium. The district was particularly fortunate in reaping good harvests in the years succeeding droughts up to 1913-14. The harvests of 1914-15 proved however disappointing and the monsoon of 1915 was again seriously short, and was followed by an exceptionally dry cold weather. This has resulted in a certain amount of depression in the weaker parts of the district.
